India

### 摘要

Engineer and Operate the Cloud platform capabilities in DevOps operating model using Agile methodology. Support the Cloud Product releases and Product Owner in representing Cloud Platform Services to Functional IT organizations

### About the Role

Major accountabilities:

- Design, Code, Implement and Support Cloud product releases and enhancements.
- Transform requirements for new capabilities or changes from architects, operations or customers to include them in the design of Cloud components
- Work in close collaboration with Architects, Design Experts and Operations to integrate new solutions and perform post release L3/L4 operational support.
- Maintain backlog and support Scrum Master and Product Manager for prioritization of release

items and Sprint planning.

- Create Cloud Service guidelines, standards including coding languages, code with comments, version control, version documentation, security considerations, audit requirement, change & release management
- Ensure operational supportability of design/development by working with operations team during design and development phase to ensure the developed solutions are always operationally supportable and are properly documented.
- Take accountability to ensure adherence with Security and Compliance policies.
- Document as required by quality, qualification processes and cloud platform services.
- Maintain Design Specification documents that are aligned with Architectural Handbook.
- Automate continuous delivery and on-demand capacity management solutions.
- Guide customers in the installation and use of strategic products through education, guidance and user manuals.
- Help to drive architectural improvements and standardization of Cloud environments
- Develop and enhance automated DevOps processes to release new solutions into the live environment.
- Ensure controls are in place for all configuration items and only authorized changes are made for all assets within enterprise IT environment.
